

## Repair those pitch marks

It only takes a few seconds. Always carry a pitchmark repairer on the course with you. A long tee will suffice if you do not have one.

### Step 1

Find the back of the mark – where the turf is highest – insert your fork behind it; push to the mark's centre.

### Step 2

Repeat this process around the pitchmark. Never lift the dent upwards as this can kill the grass – hence all the small brown circular marks on the green.

### Step 3

Finish the repair by tapping your putter on the area gently to ensure the green is completely smooth.

**Beware!** A pitchmark repaired within 5 minutes will take just 24 hours to heal, whereas one left for 30 minutes could take up to 4 weeks to repair!!
